- Maximum temperature is expected to be around 27°C - 28°C and minimum temperature is expected to be around 13°C-15 °C.

Agrometeorological Advisory

Crop	Stage	Advisory
Mustard	Seedling	Due to deep depression over South Bengal, slight temperature rise is expected and thus the attack of mustard aphid may be high. If attack is more, apply 1.5 to 2 ml metasystox per lt of water or 1 ml confidor per 1.5 lt of water.
Bengal-gram	Sowing	Sow the seeds of improved varieties of Bengal-gram like, Mahamaya1 and 2, Anuradha etc. Mix rhizobium culture before sowing. The seed rate is 6 kg per bigha.
Winter Vegetable	Seedling	Seedlings are very much vulnerable to rotting due to disease infestation which can be mitigated by applying, Hexaconazole 5% WP+ Captan 70% WP@ 1.5 gm per lt of water.
Pointed Gourd	General	For new season planting before transplanting vine should be dipped into a solution of 3 gm of Carbendazib and Mancozeb mixture with one litre water for some time and thereafter keep it in a shade area for sometime before planting. Lastly, as rain is forecasted in next few days, farmers need to prepare the proper drainage channel for all crops.
Poultry	General	Arrange more number of chicks per cage. Arrange electric bulb whole day in the cages of new born chicks. For avoiding moist condition of litter apply lime and old news paper in the litter.
