Agrometeorological Advisory

Crop	Stage	Advisory
Boro paddy	Seedling	To nullify the effect of low temperature enter water during afternoon and drain it during morning. But if seedlings turn reddish then stop irrigation. Make shade by polythene over seed bed. Apply Diathane-M-45 @ 2.5g/liter of water after drying of seed bed as precaution measurement. Stirring the seedlings for removing morning dew.
Potato	Tuber Initiation	Early blight & Late blight. In case of development of spots with concentric ring apply Chlorothalonil @ 1.5g/lit. of water. Spray (Cymoxanil + Mancozeb) @ 2g/lit. of water if there is presence of brown to black lesion starting from margin of leaf.
Cucurbits	General	Mulching may be practiced. Collection and destruction of fruit fly affected fruits need to be done.
Legume vegetable	vegetative	For control of root rot apply (Metalaxyl + Mancozeb) @ 2.0 g/ lit. of water as soil drenching.
Chicken	Chicks below 2 months	Chicken pox & susceptible to Brooder pneumonia during this season. Proper ventilation and brooding arrangement reduce the mortality. Immunization against ND (Ranikhet) & pox to all age group of birds is advisable.
